Comment on Infectious diseases Situation from 2012-2017

- No case of Dangerous Flu (H5N1), (H7N9) and Cholera.
- No outbreak in other infectious diseases. Some case of Encephalitis VR and Meningitis.
- In 2015-2016, Typhoid fever re-occurred in Dakrong District with 48 cases.
- No case of Measles within 3 years (2011-2013), but 33 cases of Measles recorded in 2014 (raising upon whole country situation), No case of Measles recorded from 2015 to now.
- Denger Fever: Number of cases of 6 six first months in 2017 decrease 27,14% compared with the same period last year.
- Malaria rises significantly and trends to continue to rise in coming time.

SUGGESTION

1. Continued to coordinate between the health units in the province, especially in the border districts for controlling infectious disease.
2. Develop Information exchange system (coordinate in MBDS). Regularly sharing health information between 3 provinces.
3. Coordinate medical quarantine at two border gates (Lao Bao – Savavnnakhet), particularly implemented SWI/SSI
4. Development and implement of Website Health MQS.
